1 Conversation-based mail

Douglas E. Comer, Larry L. Peterson

 September 1986 **ACM Transactions on Computer Systems (TOCS)**, Volume 4 Issue 4

Full text available: pdf (1.67 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

A new message communication paradigm based on conversations that provides an alternative to memo- and conference-based mail is described. A conversation-based message system groups messages into conversations, and orders messages within a conversation according to the context in which they were written. The message context relation leads to an efficient implementation of conversations in a distributed environment and support ...

2 A pilot card-based hypermedia integrated with a layered architecture-based OODB and an object-forwarding mail system

Satoshi Ichimura, Yutaka Matsushita

 April 1992 **Proceedings of the 1992 ACM annual conference on Communications**

Full text available: pdf (588.99 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The goal of our project is to develop a PilotCard-based hypermedia which allows users to create the connecting network of links through the use of an electronic mail system. Based on the goal, we developed an underlying Object-Oriented database management system with a layered architecture to combine personal work environments and a team cooperative work environment effectively. This integration provides the basis of groupware applications.
